XI.	Inspection Summary: (Description of facility walkthrough, observed permitted units, record review and post-interview)
<p>Mid City Plating is an electroplating facility. Hazardous wastes are generated from wastewater treatment sludges, spent chromate, and plating bath cleanout residue.</p> <p>Processes inspected include plating lines (Jessup, Barrel, E-coat, and Hanson lines), wastewater treatment, tote management room, and the waste storage areas.</p> <p>Paperwork reviewed included six manifests and land disposal restriction forms, contingency plan, training records, job descriptions, and inspection records. All paperwork was found to be in compliance.</p> <p>Spill equipment and emergency phones are available in storage areas and throughout the plant.</p>	

XII.	Relevant differences from previous inspections, and additional comments:
<p>There were no containers storing spent chromate at the time of the inspection; however, the facility representative stated that the waste is not labeled with the words, "Hazardous Waste" while it is being stored in the Tote Management Plant. Inspection records of the room indicate that the last container storing spent chromate was stored for several days before being sent to be treated. The facility representative was informed that any container storing hazardous waste must be labeled with the words, "Hazardous Waste" while being stored.</p>	

XIII. Permitted Facility:Observed permitted units are consistent with permit requirements: Yes _____ No _____ N/A X

If no, see Section XVII, Violation Descriptions for details.

XIV.**Pollution Prevention (P2)**

P2 opportunities may be available to help save money and reduce environmental risk/liability. You might consider having a P2 assessment, or a voluntary technical assistance consultation from IDEM staff or CMTI. Please visit the agency's P2 web site at www.in.gov/idem/oppta for additional information. The following are additional P2 suggestions that could possibly save money, reduce waste and/or minimize risk.

Labeling of all containers used to store waste, specifically the spent chromate was discussed with the facility representative. Proper labeling is necessary to avoid mismanagement of waste and injury to employees.

The availability of the Office of Pollution Prevention was discussed with the facility representative. They would like to be contacted by a representative of the P2 office to discuss overall waste management and generation rates.
